PROFESSIONAL SUMMARY

Pharmacist with 11+ years of Saudi retail pharmacy experience, transitioning into Data Analytics and Business Intelligence. Built a six-page Power BI case study using 150,000 synthetic sales lines and analyzed 7,793 food records in Python. Combines pharmacy operations knowledge with SQL, data cleaning, exploratory analysis and KPI reporting.

CORE SKILLS

Power BI, DAX, Power Query, dimensional modeling, KPI reporting, Tableau, Excel

SQL, SQL Server, joins, CTEs, window functions, Python, pandas, NumPy, Matplotlib, statsmodels, Git

Data cleaning, exploratory analysis, regression, data validation, sales and inventory analytics

PROFESSIONAL EXPERIENCE

Pharmacist | Al-Dawaa Medical Services Company | Saudi Arabia

February 2015 - Present

- Support community pharmacy operations across patient service, sales, insurance workflows and daily branch requirements.
- Spent four years in a major branch, contributing to sales growth and insurance-related improvements through customer service, accuracy and process adherence.
- Develop practical knowledge of retail KPIs, customer behavior, product movement and insurance workflows through daily pharmacy operations.

Pharmacist | Misr Pharmacies | Giza, Egypt

October 2013 - December 2014

EDUCATION

Bachelor of Pharmacy | Alexandria University | 2013

PROFESSIONAL DEVELOPMENT

DataCamp | 74 completed courses and 7 completed tracks

Completed tracks: Data Analyst in Python; Data Scientist in Python; Python Data Fundamentals; SQL Fundamentals; Data Manipulation in Python; Statistics Fundamentals in Python; Importing and Cleaning Data in Python.

Coursework covers data preparation, joins and aggregation, exploratory analysis, statistical inference, visualization, machine learning and Python programming.

25 guided project completion records, including historical versions. Track Statements of Accomplishment and the full catalogue are available at shamsinsights.com/learning.html.

Additional training: SQL (30 hours) and Tableau (20 hours).

LANGUAGES

Arabic: Native | English: Upper-intermediate | German: Beginner

SHAMSELDEEN GABER ISMAIL | ANALYTICS PROJECTS

Portfolio: shamsinsights.com | Source code: github.com/shamseldeem

SELECTED PORTFOLIO PROJECTS

Saudi Pharma Commercial Intelligence | Power BI, DAX, Power Query

- Modeled 150,000 synthetic sales lines and 48,613 invoices using 3 fact tables, 7 dimensions and 11 active relationships; built 6 report pages with 70 DAX measures and helpers.
- Published a live report and documented sales, margin, target, customer and inventory KPIs with model validation, metric definitions and filter limitations.
- Explained the model grain, reconciliation checks and reporting assumptions in a practical user guide and metric dictionary. The project uses synthetic data.

Case study: shamsinsights.com/saudi-pharma.html

Food Composition and Calorie Modeling | Python, pandas, statsmodels

- Analyzed 7,793 food records across 25 categories, standardized nutrient units, explored missing values and compared three exploratory OLS specifications.
- Published a DataCamp competition analysis in December 2023; documented the original study and a reproducible review with explicit model limitations.
- Reproduced the original baseline coefficients and added a common-sample model comparison using 4,278 training and 1,056 held-out rows in the 2026 review.

Case study and source: shamsinsights.com/nutrition.html

Pharmacy Enterprise Data Warehouse | SQL Server, Python | In progress

Developing synthetic source data, Bronze ingestion and validation; Silver and Gold transformations remain in progress.

Repository: github.com/shamseldeem/pharmacy-enterprise-data-warehouse

COMPLETED GUIDED PROJECT HIGHLIGHTS

DataCamp training projects | Selected from 25 recorded completions

- SQL analysis: When Was the Golden Era of Video Games?; Analyzing Students' Mental Health; Exploring London's Travel Network (Snowflake).
- Python data analysis: Uncovering the World's Oldest Businesses; Exploring Airbnb Market Trends; Exploring NYC Public School Test Result Scores.
- Statistical testing: Hypothesis Testing with Men's and Women's Soccer Matches.
- Predictive modeling: Modeling Car Insurance Claim Outcomes; Predicting Movie Rental Durations; Predictive Modeling for Agriculture.
- Unsupervised learning: Clustering Antarctic Penguin Species.

These are completed guided training assignments. Historical catalogue versions are identified in the learning record; independent portfolio studies are documented separately above.
